Workshop
Cooperation Opportunities for Waste Management in Europe
18th November 2014
Representation Saxony-Anhalt,
Boulevard Saint Michel 80, 1040 Brussels

During the past years, the waste industry has developed into a modern recycling and resource industry. The raising environmental, economic and legal requirements have been important factors for the structural transition of this branche. Today the recycling industry is an important economic sector in Germany and Europe, which provides solutions for important societal and ecological problems today and in the future.

The waste from yesterday becomes the resource of tomorrow. Cities and municipalities, public utilities and private companies are developing innovative technologies to improve the efficiency of raw material input, to maximize the rate of recycling and to safely remove residual waste from the cycle of materials.

The Cluster Recycling and Resource Industry is following these objectives by actively supporting the cooperation of companies and research organizations in Saxony-Anhalt. The exchange of experiences at European level is an important part of the further development of cluster activities.

The European Union supports the exchange of experience and the cooperation in the environment area in the framework of different programmes. The funding period 2014-2020 offers many new cooperation opportunities for public and private stakeholders. During the workshop important EU Programmes will be presented and discussed in view of thematic priorities of the recycling and resource industry. This should facilitate the development of joint projects in the new funding period.
